## INTRODUCTION

---

### Dear Customer

---

*ROTH Specialities is a global provider of Speciality chemicals & metal working fluid. We offers an extensive product portfolio, and smart solutions to a broad variety of industries in need of a raw material supplier. It reaches a diversity of sectors such as: Pharma, Electronics, Construction, Industrial Coatings, Inks, Polyester, Textiles, Adhesives, Foods, Cosmetics, Detergents, among many others.*

*We are recognized as an innovative company which constantly renovates with the support of cutting edge technology. This is how our productive processes are strengthened. For over half a decade, together with our customers, we have been on the search for innovative chemical solutions.*

*Our employee's continuously acquire specialist knowledge and use it to simplify your procedural management with tailor-made products.*

*We base our growth on research, our personnel's development and our deep knowledge of our client's business. Our company is committed to principals such as those of: Social Responsibility, Integral Responsibility, Sustainable Development, Environmentally friendly Production, Respect for our community and generation of trust among the people we serve.*

*It is pleasure to introduce our new 2017-2019 catalogue of our Roth's High Purity Chemicals which includes much more useful information than any catalogue before.*

*The Quality concept has evolved and nowadays, quality is not only understood as an attribute of the product, but a feature which has to be present in everything done in the company. It is useless to have an excellent product, if delivery times and technical assistance are not adequate.*

*In Roth we work under these premises, injecting quality in our all services, from the development of a product designed to cover the real customer requirements, to our after sales assistance.*

*In Roth we are offering wide range of products; Laboratory Reagents, Analytical Reagents, HPLC Solvents, Stains, Indicators, Bio Chemicals, Metals, Disinfectants, GC and HPLC Accessories, Columns, Imported Chemicals, Rare & Research Chemicals, Standards, Liquid handling Instruments and much more.....*

*All Our Chemicals are available with its Certificate of Analyses. Please ask for certificate of analyses & MSDS or visit our web [www.rothspeciality.in](http://www.rothspeciality.in)*

*When we planned to produce this catalogue we had one thing in mind: to provide our customers of a useful tool for their daily work in the lab. We hope you find it so.*

*Roth - Science - Competence*

### VISION

We will increase the value of our company by Providing excellent service, Guaranteeing quality products, Innovative leadership, Nurturing a collective sprit of unity, Responsibility through ownership

At ROTH Group, we are committed to customer satisfaction achieved by clearly understanding the customers' needs and fulfilling those requirements through continual improvement of products, services, and the quality management system.

### MISSION

We will surpass the expectations of our customers, our employees, the community and ROTH Group through world-class safety, innovation and operational excellence in the technology, production, sales and market development of specialty chemicals & technology.

ISO 9001:2015

*Certificate  
Of Registration*

WRG Certifications hereby certifies that the Quality Management System of:

## ROTH SPECIALITIES

*Plot No -41/4, Rajendra Nagar Industrial Area, Sahibabad, Ghaziabad, UP.*

has been assessed and found to operate in compliance and meets the requirement of following standard

### ISO 9001:2015

for the scope of

*Manufacturing & Marketing of Laboratory Reagents & Specialty Chemicals.*

Initial date of certification	: April 08, 2017	
Current date of certification	: April 08, 2017	
Date of expiry	: April 07, 2020	(Subject to surveillance mark present)
1 <sup>st</sup> Surveillance Date	: Mar 2018	
2 <sup>nd</sup> Surveillance Date	: Mar 2019	

Certificate Number : GMS/XX/XVII/V-2449  
NACE Code : DG-24.66

*WRG Certifications*

## ENZYMES PRODUCTS

- Serratiopeptidase Entric Coated 2200 – 2400 IU/mg, I.P. Grade
- Serratiopeptidase Powder 2200 – 2400 IU/mg, I.P. Grade
- Pepsin 1:3000 NF, 1:10000 NF, IP, USP, EP
- Pancreatine 4NF, 8NF, IP, USP, EP
- Bromelain 1200GDU, 2400GDU, 2500GDU, IP
- Fungal Diastase / Alpha Amylase 1:2000, 1:3000, IP, USP, EP
- Papain 100TU/mg, 100TU/mg, IP, USP, EP
- Alpha Galactosidase 1000 GALU, 2000GALU, IP, USP, EP
- Trypsin 1:6 , 1:10 , IP, USP, EP
- Trypsin-chymotrypsin 6:1 IP, USP, EP
- Chymotrypsin 400 u/mg, IP, USP
- Lipase 1000FCC – 50000 FCC , IP, USP, BP
- Lactase 10000 ALU/g – 1 Lac ALU/g, IP, USP/EP
- Nattokinase 20,000 FU/g, IP, USP, EP
- Co-enzyme Q10 ( Ubiquinone) 98.0% - 101.0%, IP, USP, EP
- Co-EnQ10 ( Ubiquinol) 98.0% - 101.0%, IP, USP, EP
- Invertase USP, EP

## FEED SUPPLEMENTS:

- Yeast
- MOS
- Yeast Beta Glucan
- Feed Enzymes & Probiotic

## PROBIOTIC PRODUCTS

- Saccharomyces cerevisiae powder / granules 6 billion – 20 billion cfu/g
- Saccharomyces boulardii powder / granules 6 billion – 20 billion cfu/g
- Lactobacillus sporogenus / Lactic Acid Bacillus 6 billion – 100 billion cfu/g
- Lactobacillus acidophilus 6 billion – 100 billion cfu/g
- Lactobacillus reuteri 6 billion – 100 billion cfu/g
- Lactobacillus rhamnosus 6 billion – 100 billion cfu/g
- Lactobacillus Casei 6 billion – 100 billion cfu/g  
Remaining All Lactobacillus specie
- Bacillus subtilis 6 billion – 100 billion cfu/g
- Bacillus licheniformis 6 billion – 100 billion cfu/g
- Bacillus pumilus 6 billion – 100 billion cfu/g
- Bacillus megaterium 6 billion – 100 billion cfu/g  
Remaining All Bacillus specie
- Bifidobacterium Bifidum 6 billion – 100 billion cfu/g
- Bifidobacterium longum 6 billion – 100 billion cfu/g  
Remaining All Bifidobacterium specie
- Streptococcus faecalis 6 billion – 100 billion cfu/g
- Clostridium butyricum 1 billion – 6 billion cfu/g
- Streptococcus Thermophilus 6 billion – 100 billion cfu/g

Probiotic Blend (Ready to fill customized with flavour for Capsule and Sachets)

## NUTRACEUTICAL PRODUCTS

- Maltitol
- Erythritol
- Polydextrose
- Ginseng Extract
- Grapeseed Extract
- Green Coffee Bean Extract
- Green Tea Extract
- White Kidney Bean Extract
- Garcinia Cambogia Extract
- Ginkgo Biloba Extract
- Pomegranate Extract
- Rosehip Extract Powder
- Boswellia Serrata Powder
- Astaxanthin
- Beta Carotene
- Lycopene Powder
- Zeaxanthin Powder
- DHA Powder
- EPA Powder
- Omega Three Fatty Acid ( Veg and Non-veg )
- Glucosamine sulfate salt
- Bovine Collagen Peptides
- Chondroitin sulfate
- Natural Egg shell Membrane( NEM )

## HERBAL EXTRACT:

Please Ask For All Herbal Extract and Powders.

### ROTH WATER CHEMISTRY

Water solutions from ROTH Specialities:

- Filtration Chemicals for RO,UF,MEE&MED/MSF.
- NSF Certified RO Antiscalant.
- Coagulants & flocculants.
- Charcoal Activated- Powder & Granular.
- Biocide:biocide for various applications  
(Cooling tower, Sugar Juice, Swimming pool, floor cleaners etc...)
- RBQ -1001 (Quat Based Biocide)
- RBT - 2002 (ThioCarbamate Based Biocide)
- RBG- 3003 (Aldehyde Based Biocide)
- RBB- 4004 (Bromine Based Biocide)
- RBCB-5005 (Chloro-Bromo Based Biocide)
- Chemicals & Enzyme for ETP
- Metal Precipitation
- Fog Removal
- COD / BOD Reducer
- Odour Control
- Descalant for Heat Exchanger& LP Boilers
- Regeneration of Resins (DM Plant),Replacement of Acid.
- Resin Cleaners
- Defoamers– Silicon/ Non Silicon based
- Cartage Filters

### 1st Rule of Lab Safety:

**Never use a live chicken.**

## SAFETY IN LABORATORY...

People who work in scientific laboratories are exposed to many kinds of hazards. This can be said of most workplaces; in some, the hazards are well recognized (those of ordinary fire, for example) and the precautions to be taken are obvious. Laboratories, however, involve a greater variety of possible hazards than do most workplaces, and some of those hazards call for precautions not ordinary encountered elsewhere. Therefore, this information has been provided to inform and guide the laboratory worker in safe practices which should help to avoid injury.

This chapter sets forth those practices which are deemed good safety practices common to all laboratory operations.

### A. General Rules of Safety

- No running, jumping, or horseplay in laboratory areas shall be permitted.
- No employee shall work alone in a laboratory or chemical storage area when performing a task that is considered unusually hazardous by the laboratory supervisor or safety officer.
- Spills shall be cleaned immediately. Water spills can create a hazard because of the slip potential and flooding of instruments (particularly on the floor below.) Small spills of liquids and solids on bench tops shall be cleaned immediately to prevent contact with skin or clothing.
- Ladders shall be in good condition and used in the manner for which they were designed. Wooden ladders shall not be covered with paint or other coating. (Structural defects may be hidden by the coating.)
- Lifting of heavy items must be performed in the proper fashion, using the legs to lift, and not the back.
- It is the responsibility of everyone working in the laboratory to make certain that the laboratory is left clean after work is performed.
- Consult University Policy and Procedures for policy on children in the workplace or in areas of potentially high hazards.
- Animals, except for those that are the subject of experimentation (approved by the Animal Experimentation Committee) are to be excluded from all University laboratory areas.

### B. Personal Hygiene

- Wash promptly whenever a chemical has contacted the skin. Know what you are working with and have the necessary cleaning/neutralization material on hand and readily available.
- No sandals, open toed shoes or clogs shall be worn by laboratory personnel.
- Clothing worn in the laboratory should offer protection from splashes and spills, should be easily removable in case of accident, and should be at least fire resistant. Nonflammable, nonporous aprons offer the most satisfactory and the least expensive protection. Lab jackets or coats should have snap fasteners rather than buttons so that they can be readily removed. These coats are to be fastened closed while working and removed prior to exit from the laboratory.
- Laboratory clothing should be kept clean and replaced when necessary. Clothing should be replaced or laundered using appropriate decontamination procedures whenever contamination is suspected.
- Lab coats are not to be worn outside the laboratory, especially in rest room or break facilities. Any lab coats, respirators, or other protective gear must be left in the lab areas. Employees must, as a matter of routine, be responsible for washing, cleaning, and any other decontamination required when passing between the lab and the other areas. Washing should be done with soap and water; do not wash with solvents.
- Inhalation is one of the four modes of entry for chemical exposure. "Sniff-testing" should not be done.
- Never pipette by mouth. Always use a bulb to pipette.
- Does not drink, eat, smoke, or apply cosmetics in the laboratory or chemical storage areas.
- Do not use ice from laboratory ice machines for beverages.
- no food, beverage, tobacco, or cosmetics products are allowed in the laboratory or chemical storage areas at any time. Cross contamination between these items and chemicals or samples is an obvious hazard and should be avoided.

### C. Housekeeping

- As in many general safety procedures, the following listing of good housekeeping practices indicates common sense activities which should be implemented as a matter of course in the laboratory. These recommendations are designed for accident prevention.
- THE AREA MUST BE KEPT AS CLEAN AS THE WORK ALLOWS.
- Each laboratory employee shall be responsible for maintaining the cleanliness of his/her area.
- Reagents and equipment items should be returned to their proper place after use. This also applies to samples in progress. Contaminated or dirty glassware should be placed in specific cleaning areas and not allowed to accumulate.
- Chemicals, especially liquids, should never be stored on the floor, except in closed door cabinets suitable for the material to be stored. Nor should large bottles (2.5l or larger) be stored above the bench top.
- Reagents, solutions, glassware, or other apparatus shall not be stored in hoods. Besides reducing the available work space, they may interfere with the proper air flow pattern and reduce the effectiveness of the hood as a safety device.
- Counter tops should be kept neat and clean. Bench tops and fume hoods shall not be used for chemical storage. All work done in fume hoods shall be performed in the "Safety Zone", (6" minimum from the sash).
- Stored items, equipment, and glass tubing shall not project beyond the front of shelf or counter limits.
- Stored items or equipment shall not block access to the fire extinguisher(s), safety equipment, or other emergency items.
- Stairways, hallways, passageways/aisles and access to emergency equipment and/or exits must be kept dry and not be obstructed in any fashion, including storage, equipment, phone or other wiring.
- No combustible material such as paper, wooden boxes, pallets, etc., shall be stored under stairwells or in hallways. Hallways shall be kept free of boxes and materials so that exits or normal paths of travel will not be blocked.
- Materials stored near aisles shall be restrained to prevent their falling.
- Mats and carpeting shall be kept in good condition.
- All working surfaces and floors should be cleaned regularly.
- All containers must be labeled with at least the identity of the contents and the hazards those chemicals present to users. If the contents of all containers are known we will no longer have an unknown waste disposal problem.

### D. Electrical

- The typical laboratory requires a large quantity of electrical power. This increases the likelihood of electrically-related problems and hazards. One must address both the electrical shock hazard to the facility occupants and the fire hazard potential. The following recommendations are basic to a sound electrical safety program in the laboratory.
- All electrical equipment shall be properly grounded.
- All electrical equipment shall be U.L. listed and/or F.M. approved.
- Sufficient room for work must be present in the area of breaker boxes. All the circuit breakers and the fuses shall be labeled to indicate whether they are in the "on" or "off" position, and what appliance or room area is served. Fuses must be properly rated.
- Equipment, appliance and extension cords shall be in good condition.
- Extension cords shall not be used as a substitute for permanent wiring.
- Electrical cords or other lines shall not be suspended unsupported across rooms or passageways. Do not route cords over metal objects such as emergency showers, overhead pipes or frames, metal racks, etc. Do not run cords through holes in walls or ceilings or through doorways or windows. Do not place under carpet, rugs, or heavy objects. Do not place cords on pathways or other areas where repeated abuse can cause deterioration of insulation.

- Multi-outlet plugs shall not be used unless they have a built-in circuit breaker. This causes overloading on electrical wiring, which will cause damage and possible overheating.
- Most of the portable multiple outlets are rated at 15 amps. Employees shall check when all connections are made to determine that the total input average will never exceed 15 amps. (The amperage on electrical equipment is usually stamped on the manufacturer's plate).
- All building electrical repairs, splices, and wiring shall be performed by the Physical Plant Electrical Department.
- Electrical standards may be obtained by referencing NFPA 70 - NATIONAL ELECTRICAL CODE.

### E. Vacuum Operations

- In an evacuated system, the higher pressure is on the outside, rather than the inside, so that a break causes an implosion rather than an explosion. The resulting hazards consist of flying glass, spattered chemicals, and possibly fire.
- A moderate vacuum, such as 10 mm Hg, which can be achieved by a water aspirator, often seems safe compared with a high vacuum, such as 10-5 mm Hg. These numbers are deceptive, however, because the pressure differences between the outside and inside are comparable. Therefore any evacuated container must be regarded as an implosion hazard.
- When working with a vacuum be aware of implosion hazards. Apply vacuum only to glassware specifically designed for this purpose, i.e., heavy wall filter flasks, desiccators, etc.
- Never evacuate scratched, cracked, or etched glassware. Always check for stars or cracks before use.
- Vacuum glassware which has been cooled to liquid nitrogen temperature or below should be annealed prior to reuse under vacuum.
- Rotary evaporator condensers, receiving flasks, and traps should be taped or kept behind safety shields when under a vacuum.
- All condensers connected to rotary evaporators should at least be cooled with circulating ice water.
- The use of a vacuum for the distillation of the more volatile solvents, e.g. ether, low boiling petroleum ether and components, methylene chloride, etc., should be avoided whenever possible. In situations requiring reduced pressure, two alternatives should be considered; 1) Utilization of Rotovac System, or 2) Solvent recovery via atmospheric pressure distillation (preferred method).
- Water, solvents, or corrosive gases should not be allowed to be drawn into a building vacuum system.
- When a vacuum is supplied by a compressor or vacuum pump to distill volatile solvents, a cold trap should be used to contain solvent vapors. Cold traps should be of sufficient size and low enough temperature to collect all condensable vapors present in a vacuum system. If such a trap is not used, the pump or compression exhaust must be vented to the outside using explosion proof methods.
- After completion of an operation in which a cold trap has been used, the system should be vented. This venting is important because volatile substances that have been collected in the trap may vaporize when the coolant has evaporated and cause a pressure buildup that could blow the apparatus apart.
- After vacuum distillations, the pot residue must be cooled to room temperature before air is admitted to the apparatus.
- All desiccators under vacuum should be completely enclosed in a shield or wrapped with friction tape in a grid pattern that leaves the contents visible and at the same time guards against flying glass should the vessel collapse. Various plastic (e.g., polycarbonate) desiccators now on the market reduce the implosion hazard and may be preferable.

### F. Handling Glassware

- Glass breakage is a common cause of injuries in laboratories. Only glass in good condition should be used.
- Discard or send for repair all broken, chipped, starred or badly scratched glassware. Hand protection should be used when picking up broken glass.
- Clean all glassware before sending for repair.

- When using glass tubing, all ends should be fire polished. Lubricate tubing with glycerin or water before inserting into rubber stoppers or rubber tubing.
- Protect hands with leather gloves when inserting glass tubing. Hold elbows close to the body to limit movement when handling tubing.
- Do not store glassware near the edge of shelves. Store large or heavier glassware on lower shelves.
- Use glassware of the proper size. Allow at least 20% free space. Grasp a three-neck flask by the middle neck, not a side neck.
- Do not attempt to catch glassware if it is dropped or knocked over.
- Conventional laboratory glassware must never be pressurized.

### Safety Practices for Disposal of Broken Glassware

- Inspect all glassware before use. Do not use broken, chipped, starred or badly scratched glassware. If it cannot be repaired, discard it in containers specifically designated for broken glass. All broken glass requires special handling and disposal procedures to prevent injury not only to lab personnel, but members of the janitorial staff as well.
- All broken glass shall be disposed in rigid, puncture proof containers such as a cardboard box with taped seams, or a plastic bucket or metal can with a sealing lid. All broken glass disposal containers shall be clearly marked "DANGER - BROKEN GLASS" Limit quantities to no more than approximately 15 to 20 pounds so that lifting of the container will not create a situation that could cause back injury.
- Food, beverage, and uncontaminated glassware: Dispose in a rigid, puncture proof container such as a box with sealed or taped edges or a metal or thick plastic can or bucket with a sealing lid. Label container "DANGER - BROKEN GLASS".
- Radioactive glassware: Contact the Radiological Safety Officer for specific instructions.
- Glassware with biological contamination: Glassware that has been in contact with infectious agents may include: used slides, cover slips, test tubes, beakers, pipettes, etc. Contaminated glassware shall be disinfected before disposal. Dispose in a rigid, puncture proof container such as a box with sealed or taped edges or a metal or thick plastic can or bucket with a sealing lid. Label container "DANGER - BROKEN GLASS". Contact the Biological Safety Officer if you require further information.
- Glassware with chemical contamination: Empty the contents of the glassware into a suitable container if safe to do so. Contact Environmental Health Services, Hazardous Materials Section, for assistance with decontamination and disposal of the contaminated glassware.

### Treated Biomedical Waste

- The following procedure for handling Treated Biomedical Wastes generated in campus labs was developed from Oklahoma Administrative Code (OAC) 252:500, "Solid Waste Management Regulations," section 252:500-15-2. Definitions: The following words and terms, when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:
- "Treated biomedical wastes" means any biomedical waste that has been treated by one of the following methods and rendered harmless and biologically inert:
- Incineration in an approved incinerator;
- Steam sterilization at sufficient temperature and for sufficient time to destroy infectious agents in waste;
- Chemical disinfection where contact time, concentration and quantity of the chemical disinfectant are sufficient to destroy infectious agents in waste;
- Any other treatment methods approved by the Oklahoma Department of Environmental Quality and generally recognized as effective. Note that incineration in an approved incinerator is the preferred method of treatment. The only acceptable treatment for antineoplastics and cytotoxic drugs is incineration in a specially designed on-site incinerator approved by the Department for that purpose, a commercial biomedical waste processing facility, or a facility permitted to dispose of waste.
- (Using the above definitions and guidelines, and further referencing OAC 252:500-15-3, section (d) Treated Biomedical Waste.) Biomedical waste that has been treated as described in 252:500-15-2 and packaged such that it is clearly evident that the waste has been effectively treated is not subject to regulation as
